WDD FINAL PROJECT WRITE-UP:

I created a map of interesting architecture I visited during my time in Japan this past summer. My three main features are 1. **Hover effects** on the map markers 2. the **Loading animation** on the bottom right 3. the **Fade in** effect on each page. The hover effects indicates to users that the markers are clickable. Without it, people probably won't know where to click. The loading animation makes the page more fun and dynamic. Since the interface is so minimal and static I wanted to bring some life to the picture. I wanted to curate the overall user experience when people are going from page to page, so I decided to fade in all the elements as people navigate through the website to slow down the pace of everything and create a relaxed feeling (to mimic how I felt when I was strolling through the streets).

Thank you for the fun semester. I learnt a lot:)
